ENDANGERED FAUNA

Mammal

Species

definition

Vertebrates, they are born from the mother's womb (viviparous) and feed their young with milk.

habitat

All habitats on earth, air, water, forests, cold regions and especially in grasslands.

Global risk

cause

Destruction and fragmentation of their habitats, climate change, hunting, illegal trafficking and the introduction of exotic species.

Current situation

8 species are extinct, 202 are at risk and 3 have established wild populations.

Bird

Species

definition

Vertebrates, born from the egg (oviparous), beak, body covered in feathers, with two legs and two wings

habitat

All terrestrial, continental aquatic ecosystems and some on the marine surface.

Global risk

cause

The excessive use of herbicides, pesticides and other agrochemicals such as neonicotinoids.

Current situation

One in eight species; That is, 1,409 species in total are now threatened with extinction.

Insect

Species

definition

Invertebrates, sexua and asexual, have 2 antennas, three pairs of legs and two pairs of wings.

habitat

All environments or Earth: jungles deserts, cold areas fresh water and living and dead beings.

Global risk

cause

Habitat loss due to intensive agriculture, agrochemical contaminants, invasive species and climate change

Current situation

More than 40% are declining and a third are in danger of extinction, which is eight times faster than that of mammals, birds and reptiles.
