COMITAN CHIAPAS; EAT ON JULY 2020.

INTRODUCTION

¿How will the wather de today? It's 11 the morning calm down a bit. The wind and the cold but the rain still continue in less quantity bur it doesn't stop and apparently it will continue like this today.

With so much cold rain fog, there are changes in the climate in a certain way it affects vs fro our work to our health.

The temperature is lowering more, the day is very cold and the wind has started again, when the temperature is up we cannot go out to work, those of us who live in the contryside or rural areas; because everything we do or our activities are way from home.

A day with a rainy, cold weather etc.

Today, Monday, July 4 2020. At 6 in the morning we have a fairly cool and cloudy climate with an 80% chance of rain. At 8 in the morning the temperature is still very cold. It has started to rain, not very hard, but if the weather tends to get worse with this climate we cannot go out because it is quite windy and strong. That makes the rain feel strong. To go out you have to use a raincoat and you have to cover yourself, well.

It's 11 in the morning, calm down a bit. The wind and the cold, but the rain still continues in less quantity, but it doesn't stop and apparently it will continue like this today. In the afternoon the rain is gone, but it is still very cloudy and it is lowering a lot of fog. You can not see anything, everything is turning white. It is because of the cold that has started through. The temperature is lowering more, the day is very cold and the wind has started again. When the temperature is up we cannot go out to work, those of us who live in the countryside or rural areas; because everything we do or our activities are way from home...

It favors us in a certain way since with the rain everything flourishes, there is more production, but maybe these climatic changes do not favor us for our health.

It is 4 in the afternoon and the rain is still going on and getting stronger. Today there were many moments and in one day many changes in the weather. They were present from morning until sunset. There was rain, fog, water, cold wind, and no sun as it has already rained too much. Water currents have already formed, the land no longer prints, it is already a lot. The land is already very soft and is already muddy and you can no longer step on it without getting your feet dirty. It is a beautiful panorama, but many of us do not like it.

This climate will remain throughout the night, the rain will be very strong, and without wind.

CONCLUSION

When the weather turns to us it favor us since we cannon carry out daily tanks in a normal way. And at the same time and in a contradictory way ithelps us in the crops in the plantation for which we live in rural areas, and from my poin of view itt is a beautiful phenomenon and port of nature as long as it is not too much.
