“Signs and Symptoms”

Frontera Comalapa, Chiapas a 03 de Agosto del 2020

SIGNS AND SYMPTOMS

Examples

- ❖ Dizziness
- ❖ Numbness
- ❖ Lightheadedness
- ❖ Fatigue
- ❖ Vision disturbances

What is a symptom?

Symptoms can only be described by the person feeling them. If you are having pain, no one knows unless you tell them.

Examples

- ❖ Breathing frequency
- ❖ Heart rate
- ❖ Temperature
- ❖ Pulse

Temperatura

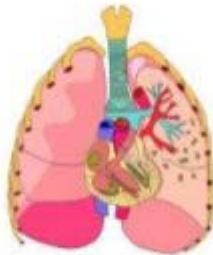

Pulso arterial

Presión Arterial

Respiración

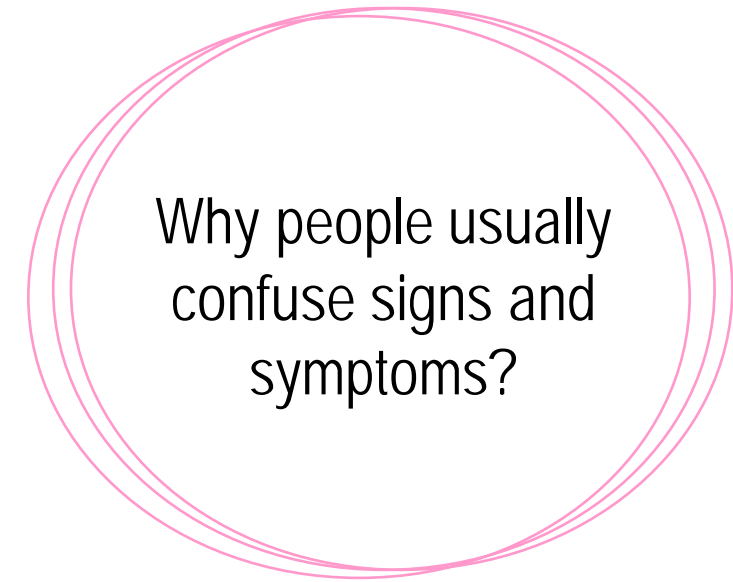

What is a
sign?

Medical signs aren't always read with the eyes. Sometimes we read signs by touch or by listening.

The most common signs are the skin signs: color, temperature, and moisture.

Simultaneous Signs and Symptoms

SIGNO	SINTOMA
a crying baby	can be a hungry baby
Does your daughter scratch her arm	She should feel itchy
People vomit	when they feel nauseous

Why people usually confuse signs and symptoms?

Because they usually classify everything that they do not see normal in their body, as a symptom of a possible disease.

They do not know how to distinguish between those that can be measured and those that are only perceived by themselves.

SINGS

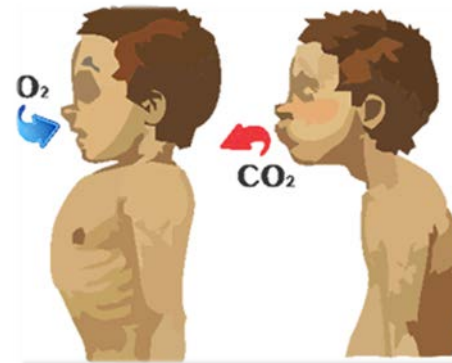

Blood pressure

Pulse

Temperature

Breathing frequency

SYMPTOM

Cough

Threw up

Dizziness

Shaking chills
