“Descriptions of occupation”

## Intoduction

Medicine is a very important profession; it is the one in charge of maintaining people's health. to this many other profeciones join, like nurses, nutritionists, chemists and others. next I will tell you about the laboratory technician

## Developing

Laboratory technicians assist and support the scientists' work.

They are usually responsible for the daily operation of the laboratory. They perform a wide variety of functions, including

- ✚ Organize and clean the laboratory.
- ✚ Eliminate laboratory residues.
- ✚ Prepare the equipment and carry its maintenance.
- ✚ Take and analyze samples.
- ✚ Record and examine the results of the experiments.

Communicate the results to the scientific manager, in word or in writing.

For this job it is necessary to have some skills:

- ✓ Observation skills and attention to detail
- ✓ Capacity for teamwork
- ✓ able to use a wide variety of laboratory equipment

His work involves concentration and discipline, it's difficult but rewarding, they work in hospitals, investment trails and private laboratories.

According to ricardo gonzales laboratory technician at the Inter American hospital “we are part of a chain, to improve people's health, the job is not easy but it is gratifying to see your patient improve” words of a person who works for the good of many more people.

## Conclucion

The laboratory technician is a little known and recognized job, but in these times, all those people who expose themselves to improve the health of society are heroes without capes
