WHAT IS A SYMPTOM

Symptoms are signs of diseases.

Symptoms can only be described by the person feeling them. If you are having pain, no one knows unless you tell them. If you are having pain no one knows unless you tell them, it's the same with dizziness, numbness, lightheadedness, fatigue, vision disturbances, ringing in your ears, and whole host of other feelings. Symptoms help us identify what is wrong.

SYMPTOMS.

- ▶ Symptoms is a warning that health may be at risk due to psychological, social or physical.

SIGNAL.

- ▶ The signal refers to the set of symptoms that show the patient's health, exaple, inflammation of the eye is a signal that there is a problema.

SIGNS AND SYMPTOMS.

- ▶ Because there are people who confuse the signs as a symptom. Sometimes the signs indicate symptoms such as a young woman scratching her arm which is a sign and a symptom that she must feel itchy.

Symptom a infarction.

An inflammation in the eye is a sign that there is a problem.

It is a sign that your forehead is being touched
