“Describing the hospital team”

Introduction

In this topic I will focus on explaining a brief description of the radiologist, based on what he specializes in, what are their techniques, what role do they play in the area of health, where do they work, what is their objective in carrying out this profession and what do they love the most to do what is beautiful for them in their work.

Desarrollo

In this description, the radiologist is a doctor who specializes in the diagnosis and treatment of diseases and injuries, uses medical imaging techniques such as x-rays, computed tomography, nuclear magnetic resonance, ultrasound. The radiologist includes the use of radiation and knowledge of safety practices, plays a very important role in the health area, treats diseases using image-guided (radio-oncology), radiologist not only work in hospital centers but also in private hospitals and in diagnostic imaging centers, radiologist perform exams that cover all the organs and systems of the human body. Evaluates the presence of herniated disc problems in the spine, broken bones, etc. The radiologist's work is not so easy since when performing x-rays or other they must analyze and study to obtain a correct diagnosis. The goal of the radiology profession is to provide information and educate the public about radiological procedures and to improve communication between physicians. Radiology is dedicated to serving as a trusted source of information for patients and their families, Radiologist dedicated themselves to this profession with a goal and to see how wonderful it is to see inside our bodies through images, to look at people in a different way.

Conclusion

I hope that this brief description helps us to understand and know more about what the radiologist does in the health area, how important it is to help patients in the hospital that favorable diagnoses are obtained through the use of technology.
