# Medical instruments

A hospital has different areas, each of which helps in the treatment of diseases in different parts of the body, such as Gynecology, Obstetrics, Pediatrics, just to mention a few of them.

Each area uses different special instruments to perform its tasks, here you can see some of these tools and their uses that you can find in a hospital.

ECG is an instrument used to monitor the heart.

Microscope is for examining tissues, samples, etc, very closely.

Centrifuge is for separating substances by spinning them.

Scale is used to weigh substances in a laboratory.

Exercise machine is usually used for medical treatments to get strenght again after a injury.

Let's talk about Bone plate which are used to fix bones when they are broken.

In Dermatology área, doctors use a Dermabrader to remove damaged skin.

When a person has kidney problems a Dyalisis machine helps to clean blood.

If you have problems with your nerves Neurological pinwheel tests for sensations in them.

In Pediatrics area Pediatric spoon is used to specially for children to grip.

Scalpel is mostly used by surgeons to perform operatios, it can cut your skin and is very dangerous if you play it.

When a radiologist needs to watch into your body, specially your bones he uses a X- ray machine to examine them.

Neurological pinwheel

Scalpel

Microscope

Centrifuge

Pediatric spoon

X- ray machine

Bone plate

Dermabrader

Exercise machine

ECG

Dyalisis machine

Scale

And now it's your turn, write about 5 instruments

1. Scissors

The scissors is an instrument composed of two opposite blades, cutting with a single edge and mobile on an axis, which is used to cut. All surgeons use them.

2.-kidney tray

Made of stainless steel all-purpose plate for transporting manicure tools, waste, nursing care, etc. Kidney shape allows it to be held against the body to catch any liquid or debris drop Size: Large , Medium, or Small (Detailed dimensions please see in description) Brand New - Slight scratches on body tray are normal (caused in production)

3.-Babcock forcep

The pressure clamps are used to achieve strong and sustained fixation. They are usually scissor-shaped, central articulated and can be straight or curved. They are used both to take tissue, gauze or sponges, sometimes also to perform pressure hemostasi.

4.-Stethoscope

It is an acoustic device used in medicine, nursing, for auscultation or to hear the internal sounds of the human or animal body. It is generally used in the auscultation of heart sounds or respiratory sounds, although sometimes it is also used to objectify bowel sounds or murmurs due to abnormal blood flows in arteries and veins.

5.-Nebulizer machine

A nebulizer is a device that divides liquid medicine into very small drops. The cloud is led through a plastic tube that is attached at one end to the outlet of the device and the other to a plastic piece that is placed over the mouth or inserted into the nostrils .
