Medical instruments

A hospital has different areas, each of which helps in the treatment of diseases in different parts of the body, such as Gynecology, Obstetrics, Pediatrics, just to mention a few of them.

Each area uses different special instruments to perform its tasks, here you can see some of these tools and their uses that you can find in a hospital.

ECG is an instrument used to monitor the heart.

Microscope is for examining tissues, samples, etc, very closely.

centrifuge is for separating substances by spinning them.

Scale is used to weigh substances in a laboratory.

Exercise machine is usually used for medical treatments to get strength again after an injury.

In Dermatology area, doctors use a dermabrader to remove damaged skin. When a person has kidney problems a dialysis machine helps to clean blood. If you have problems with your nerves neurological pinwheel tests for sensations in them.

In Pediatrics area pediatric spoon is used to specially for children to grip.

Scalpel is mostly used by surgeons to perform operations, it can cut your skin and is very dangerous if you play it.

When a radiologist needs to watch into your body, specially your bones he uses a x-ray machine to examine them.

Neurological pinwheel

Centrifuge

Bone plate

ECG

Scalpel

Pediatric spoon

Dermabrader

Dialysis machine

Microscope

X-ray machine

Exercise machine

Scale

And now it's your turn, write about 5 instruments
