Medical instruments

A hospital has different areas, each of which helps in the treatment of diseases in different parts of the body, such as Gynecology, Obstetrics, Pediatrics, just to mention a few of them.

Each area uses different special instruments to perform its tasks, here you can see some of these tools and their uses that you can find in a hospital.

ECG is an instrument used to monitor the heart.

Microscope is for examining tissues, samples, etc, very closely.

Centrifuge is for separating substances by spinning them.

Scale is used to weigh substances in a laboratory.

Exercise machine is usually used for medical treatments to get strenght again after a injury.

Let's talk about Bone plate which are used to fix bones when they are broken.

In Dermatology área, doctors use a Dermabrader to remove damaged skin.

When a person has kidney problems a Dyalisis machine helps to clean blood.

If you have problems with your nerves Neurological pinwheel tests for sensations in them.

In Peditrics area Pediatic spoon is used to specially for children to grip.

Scalpel is mostly used by surgeons to perform operatios, it can cut your skin and is very dangerous if you play it.

When a radiologist needs to watch into your body, specially your bones he uses a X-ray machine to examine them.

Neurological pinwheel

Scalpel

Microscope

Centrifuge

Pediatic spoon

X-ray machine

Bone plate

Dermabrader

Exercise machine

ECG

Dyalisis machine

Scale

And now it's your turn, write about 5 instruments

1.- Stethoscope is generally used in auscultation of heart and respiratory sounds
