FRONTERA COMALAPA, CHIAPAS TO 28 OF JUNE OF THE 2020.

MIDWIFE

Male and female names. Person whose job is to assist a woman in childbirth in the past, this profession was exercised only by woman based on traditional experience and now requires specific qualifications.

Therefore, a midwife is only person who dedicates his or her work to the obstetric process, regardless of his or her degree of professionalization. A resident of the department of obstetrics in a local hospital in the state of Chiapas expressed her heart's hope that with my participation as the new head of the maternal health program in the region could do sum thing to make all midwives disappear censor and judge them, because they put the lives of many women at risk.

Midwives work in the home of women in lab our, using methods onther than clinical. The birth is performed in a kneeling position with abdominal pressure, so it is considered that their work is not easy and they do not have the necessary hygiene measures.

One of the beautiful things about ther work is to be able to contribute to the act bringing a new human being into the world.
