Calcular las derivadas de las funciones

$$\textcircled{1} f(x) = 5 \\ = 0 \text{ R/0}$$

$$\textcircled{2} f(x) = -2x \rightarrow \frac{dy}{dx} = \textcircled{-2} \text{ R/0}$$

$$\textcircled{3} f(x) = -2x + 2 \rightarrow \frac{dy}{dx} = \textcircled{-2} \text{ R/0}$$

$$\textcircled{4} f(x) = -2x^2 - 5 \rightarrow \frac{dy}{dx} = \textcircled{-4x} \text{ R/0}$$

$$\textcircled{5} f(x) = 2x^4 + x^3 - x^2 + 4 \rightarrow \frac{dy}{dx} = 8x^{4-1} + 3x^{3-1} - 2x^{2-1} \\ = \textcircled{8x^3 + 3x^2 - 2x} \text{ R/0}$$

$$\textcircled{6} f(x) = \frac{x^3 + 2}{3} \rightarrow \frac{1}{3} \cdot x^3 + 2 \rightarrow \frac{dy}{dx} = \frac{1}{3} \cdot 3x^2 \\ = \frac{3x^2}{3} = \textcircled{x^2} \text{ R/0}$$

$$\textcircled{7} f(x) = \frac{1}{3x^2} \rightarrow \frac{1}{3} \cdot x^{-2} \rightarrow \frac{dy}{dx} = \frac{1}{3} \cdot -2x \\ = \textcircled{\frac{-2}{3}x} \text{ R/0}$$

$$\textcircled{8} f(x) = \frac{x+1}{x-1} \rightarrow \frac{(x-1)(1) - (x+1)(1)}{(x-1)^2} \\ \rightarrow \frac{(x-1) - (x+1)}{(x-1)^2} \rightarrow \frac{x-1-x-1}{(x-1)^2} \rightarrow \frac{dy}{dx} = \frac{-2}{(x-1)^2}$$

$$g) f(x) = (5x^2 - 3) \cdot (x^2 + x + 4)$$

$$= 5x^4 + 5x^3 + 20x^2 - 3x^2 - 3x - 12$$

$$5x^4 + 5x^3 + 17x^2 - 3x - 12$$

$$\frac{dy}{dx} (5x^4) + \frac{dy}{dx} (5x^3) + \frac{dy}{dx} (17x^2) - \frac{dy}{dx} (3x) - \frac{dy}{dx} (12)$$

$$20x^3 + 15x^2 + 34x - 3 - 0$$

$$\frac{dy}{dx} = 20x^3 + 15x^2 + 34x - 3$$
