**Único**

## **THE IMPORTANCE OF THE ENGLISH LANGUAGE IN YOUR CAREER AND THE BENEFITS**

Learning languages is a fundamental tool to stimulate the brain, prevent dementia, promote memory and concentration, among other benefits. English is a fundamental language since it opens the doors to a large number of possibilities, it serves us to write clinical reports, trials, laboratory reports and research papers, in conferences on health topics, to read medical texts that are published in English, in the understanding of medical equipment manuals, when communicating with foreign patients and health professionals of other nationalities when giving them the report on the condition, to write letters for medical purposes, medical prescriptions and in the drafting of patient case reports, as well as reading medications that come in that language.
