## **why is the language English important in the infirmary**

Through research that have been carried out in most cities, patients arrive from other parts and make it very necessary as the first instance or first health person they meet The patient is with the nurse, so there must be a good Communication between both parties also to study a specialty is very important since most drugs handle the English language very frequently In addition, that for me seems to be a great tool when applying for a job because now it is becoming indispensable in the workplace since most companies are foreign and that allows you to request a promotion abroad for your employees.

Knowing English or any other alternative language gives us the opportunity to inspire ourselves for a better future outside the country and would make it easier for us to go as far as we say when we have the opportunity to learn to see, take advantage of it for the good of our future
