3. REDACTAR PORQUE TE GUSTA TU CARRERA Y QUE ES LO QUE TE DISGUSTA DE ELLA.

I like Nursing because in this career where they provide a combination of assistance, knowledge and trust that is essential for the survival of patients, it is also a way to help people, I like this career because nurses play a role essential in the recovery of a patient. And it is not only based on taking the pulse and blood pressure, which although it is essential, nurses also offer comprehensive assistance, which includes listening patiently to the concerns and fears of the patient, as well as giving them emotional support and comfort.

A doctor is in charge of curing but a nurse is in charge of taking care of a patient, I like to deal with people. What I don't like about this career is that when it is already exercised, sometimes it is inevitable to see a patient die, there are times when unfortunately you can no longer do more for that person, I think it is one of the most unpleasant things that is they can witness since no one wants to see a person die.

Although altruism and empathy is an essential quality in this profession, to be competent in it you need something more. It takes a lot of preparation and extensive experience, which is why we are preparing so that one day we can help humanity. Nursing is said to be an eternal profession, because as long as illnesses exist there will be a need for care. It also takes love for people and a sincere desire to help others.
