

**Nombre de alumno: Layla Carolina  
Morales Alfaro**

**Nombre del profesor: Dra. Rosvani  
Margine Morales Irecta**

**Nombre del trabajo: “El fin”**

PASIÓN POR EDUCAR

**Materia: Biomatemáticas**

**Grado: 2**

**Grupo: A**

# Metronidazol

Dosis oral 500mg

[C] plasmática max = 8 a 13 mg/L  
en un tiempo max 0.25 a 4.0hr

Biodisponibilidad por vía oral: ± 90%

[C] plasmática % = 450mg

500mg → 100%  
150mg → 90%

8mg → 100%  
17.2% → 90

32.4 mg/L [C] plasmática

$$P_1(x_1, y_1)$$

$$P_2(x_2, y_2)$$

$$P_1(.30, 8.1) = \frac{32.4 - 8.1}{4 - .30} = \frac{24.3}{3.7} = 6.56$$

$$\bullet y = m(x) - x_1 + y_1$$

$$y = (6.56)(12) - .30 + 8.1 = 86.56$$

$$y = (6.56)(24) - .30 + 8.1 = 165.24$$

• función =

$$y = \int 6.56x + 8.1 \quad \Big|_{-.30}^{12}$$

$$f(x) \Big|_a^b = f(b) - f(a)$$

$$f(x) = \int 6.56 dx + \int 8.1 dx$$

$$= 6.56 \int \frac{x^{1+1}}{1+1} + 8.1 \int dx$$

$$= 6.56 \frac{x^2}{2} + 8.1x$$

$$a) \left[ \frac{6.56(12)^2}{2} + 8.1(12) \right] - \left[ \frac{6.56(.30)^2}{2} + 8.1(.30) \right] =$$

$$\left[ \frac{944.64}{2} + 97.2 \right] - \left[ \frac{0.59}{2} + 2.43 \right] = 569.52 - 2.72 = 566.8$$

$$b) \left[ \frac{6.56(24)^2}{2} + 8.1(24) \right] - \left[ \frac{6.56(.30)^2}{2} + 8.1(.30) \right] =$$

$$\left[ \frac{3778.56}{2} + 194.4 \right] - \left[ \frac{0.59}{2} + 2.43 \right] = 2083.68 - 2.72 = 2.080$$
