

punto de intersección

$$a) x = 2x - 4$$

$$b) y = -3x + 2$$

$$2x - 4 = 3x + 2$$

$$2x - 3x = 2 - 2x$$

$$-1x - 0x$$

$$x = \frac{0}{-1}$$

$$x = 0/1$$

$$a) y = -x + 12$$

$$b) y = -3x + 26$$

$$-x + 12 = -3x + 26$$

$$-x + 3x = 26 - 12$$

$$2x = 14$$

$$x = \frac{14}{2}$$

$$x = 7$$

Diego Eduardo Cruz Ayala

a) $t = x + 1$
b) $t = \frac{3}{4}x + 8$

$$\begin{aligned} a) y &= \frac{1}{2}x + 2 \\ b) y &= 3x + 9 \end{aligned}$$
