

UNIVERSIDAD DEL SURESTE

NOMBRE DEL ALUMNO: YORDI DIAZ LOPEZ

NOMBRE DEL PROFESOR: JOSE JESUS HERNANDEZ LANDERO

CUATRIMESTRE: "3"

MATERIA: INGLES III

TEMA: ESTOY ENFERMO.

LICENCIATURA: LIC. EN ENFERMERIA.

FECHA DE ENTREGA: 27/07/23.

FEVER (FIEBRE)

DEFINITION:

Fever is a temporary rise in temperatura above 38°C.

Fever is part of the body's reactions against an infection.

CAUSATIVE AGENTS

Fever is caused by a group of endogenous and exogenous substances known as pyrogens.

SYMPTOMS

- Chills or sweating.
- Fatigue.
- Headache.
- Muscle pains.
- Nausea, vomiting, or diarrhea.
- Stomachache.

TREATMENT

Drink a lot of liquid: the body needs to use more water to compensate for its elevated temperatura.

Rest: countering an infection requires a lot of energy.

Take a lukewarm bath: take a warm bath to help the body cool down.
