VETERINARY

History of Veterinary medicine

Medical specialty concerned with the prevention, control, diagnosis and treatment of diseases affecting the health of domestic and wild animals and the prevention of the transmission of diseases from animals to humans.

Veterinary practice was already established as a specialty as early as 2000 BC in Babylon and Egypt.

Today veterinarians serve worldwide in private and corporate clinical practice, academic programs, public health, and military services.

Pharmaceutical companies employ veterinarians in the development, safety testing, and clinical evaluation of drugs, chemicals, and biologics such as antibiotics and vaccines for animals and people.

Importance of animal health

Animals are responsible for producing some of the main foods. These foods complete our balanced diet and help us lead a healthy life.

Considering the importance of animal health, Veterinary Medicine Company of India formulates medicines that can treat the health status of animals

Ensure good health and maintain the production of animal goods.

Developmental, economic, social and medical impacts of the global burden of nutrition are severe and long-lasting for individuals and their families, communities and countries.
