

DEGREE IN VETERINARY MEDICINE AND ZOOTECHNICS

ENGLISH I

“VETERINARY MEDICINE AND  
ITS RELATIONSHIP WITH OTHER SCIENCES”

TEACHER: ENRIQUE EDUARDO ARREOLA JIMENEZ

STUDENT: KRISTELL MICHELLE MALDONADO CUÉ

1ST QUARTER

NOVEMBER 2023

## VETERINARY MEDICINE AND ITS RELATIONSHIP WITH OTHER SCIENCES

### 1 ANATOMY

Anatomy in relation to veterinary medicine is important because it involves learning the parts of the animal body, the location of its organs, bones, devices and systems.

### 2 BIOCHEMISTRY

Biochemistry in relation to veterinary medicine is important because it involves learning the chemical reactions produced in the body, whether by hormones, enzymes, proteins, metabolic processes, among others.

### 3 PHYSIOLOGY

Physiology in relation to veterinary medicine is important because it involves learning the functions played by organs, devices and systems in the body.

### 4 EMBRYOLOGY

Embryology in relation to veterinary medicine is important because it involves learning the different stages that an animal goes through before its birth. From the fertilization process to the embryonic period where the organs and tissues of the fetus develop and the final stage before childbirth.

### 5 HISTOLOGY

Histology in relation to veterinary medicine is important because it involves learning the organization and composition of the different tissues and cells that make up the organism.

### 6 PARASITOLOGY

Parasitology in relation to veterinary medicine is important because it involves the learning and diagnosis of diseases caused by parasites, which affect animals and humans.
