

NOMBRE DEL ALUMNO:

Jesús Reveriano Arreola Gonzalez

CATEDRÁTICO:

Enrique Eduardo Arreola Jimenez

ASIGNATURA:

Ingles

SEMESTRE:

Primer cuatrimestre

GRUPO O ÁREA:

Médico veterinario zootecnista

PROYECTO: (trabajo a entregar)

Mapa conceptual

Veterinary

WHAT IS VETERINARY MEDICINE?

It is a type of medical specialty for the prevention, control, diagnosis and cure of diseases that affect the health of domestic and wild animals.

SIGNIFICANCE OF ANIMAL HEALTH:

Animals are responsible for producing some major food items. Those food items make our balanced diet complete and help us in living a healthy life. We are still dependent on the animal for resources like eggs, milk, meat etc.

PUBLIC HEALTH

Public health veterinarians are those veterinarians who practice veterinary medicine with a specific focus on protecting human and animal populations from disease and injury caused by animal-related sources.

THE SCOPE OF VETERINARY MEDICINE

Today's veterinarians are the only doctors educated to protect the health of both animals and people. They work hard to address the health and welfare needs of every species of animal. Veterinarians also play critical roles in environmental protection, research, food safety, and public health.

KNOW THE IMPORTANCE OF VETERINARY MEDICINE COMPANIES:

- **Maintaining Animal Health:** Veterinary medicines and care are the most crucial elements for veterinarians.
- **Food Safety and Public Health:** Veterinary medicines are necessary to maintain the level of food safety and its availability as well.
