VETERINARIA

QUIMICA

It is the most common analysis when we have clinical symptoms that allow us to direct the analysis towards a specific group of toxins.

MATEMATICA

This area is mainly used for statistics. For the control of weight gain and loss of animals.

NUTRICION ANIMAL

theoretical studies and their practical application to be applied to animals, focusing on their health and welfare.

ANATOMIA

Knowledge of the macroscopic shape and structure of organs and systems, as well as their organization and relationship within the organism

AGRONOMIA

Knowledge of the macroscopic shape and structure of organs and systems, as well as their organization and relationship within the organism

MICROBIOLOGIA

It allows us to know the bacteria and microbes that directly affect animals and those that affect humans through direct contact with animals.
