# ***NURSING DUTIES***

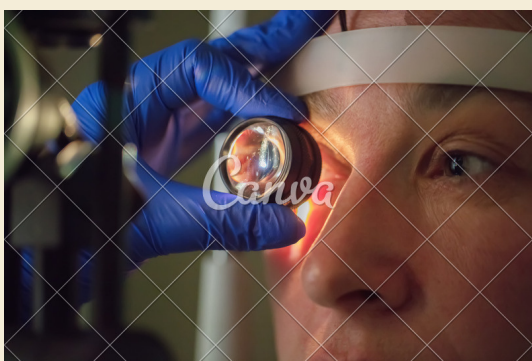

## **Take the patient's medical history**

Your name, date of birth, blood type, and emergency contact. Date of your last physical exam. Dates and results of tests and studies. Most important illnesses and surgeries, with dates

## **Perform a physical examination**

Measure your weight, blood pressure, temperature, heart rate, as well as check your ears, nose, lungs, throat and eyes

## **Perform laboratory tests**

They examine samples of blood, urine, or body tissues. A technician or doctor analyzes the samples to determine if the results are within normal limits.

## **To diagnose**

Process in which a disease, condition, or injury is identified by its signs and symptoms.

## **Treat and manage diseases**

Measures aimed at avoiding the appearance of a disease or health problem, by controlling the causal agents and risk factors.

## **Prescribe medications**

Standardized medical-legal document by which legally trained medical practitioners prescribe the patient the medication they need, for dispensing by pharmacies

## **Rehabilitate the patient**

It is the care that the patient receives to recover, maintain or improve the abilities needed for daily life.

## **Constantly check the patient**

Control consists of measuring vital signs (temperature, blood pressure, pulse and respiratory rate).
