

**SCHOOL: UNIVERSIDAD DEL SURESTE**

**SYNOPTIC TABLE**

***NURSING AND ITS RELATIONSHIP WITH OTHER SCIENCES***

**ENGLISH I**

**UNIT III**

**DEGREE IN NURSING 1°**

**STUDENT: HANNA MICHELL DE LOS SANTOS SOLORIO**

**TEACHER: EDUARDO E. ARREOLA JIMÉNEZ**

**DEADLINE: NOVEMBER 09, 2023**

# NURSING AND ITS RELATIONSHIP WITH OTHER SCIENCES

## **Biology**

It is the science that deals with living beings, their origin, evolution and properties.

It is related to nursing, since it is focused on knowing diseases and human processes.

## **Anthropology**

It studies the human being within the framework of a society and culture, the origin and development as well as social behaviors through time and space.

It is related to nursing to learn about the origins of nursing and enrich it from previous experiences.

## **Geography**

Study the earth's surface and the societies that inhabit it.

It helps nursing determine the type of preventive activities according to the conditions where the population lives and the resources.

## **Demography**

It studies human populations, their dimensions, structure, evolution and characteristics, and statistically studies the structure and dynamics of the population.

It is related to nursing to know the groups of people with whom it has to work, especially in preventive measures.

## **Pharmacology**

Science and practice of conservation, preparation and dispensing of medications in terms of the diagnosis, treatment and prevention of diseases.

This science is related to nursing in terms of the supply of medications and their management.

## **Medicine**

It studies life, health, diseases and death of human beings.

It is the science to which nursing is most closely linked, along with it an interdisciplinary team is formed for patient care.

## **Psychology**

Studies the observable behavior of individuals and their mental processes.

Nursing helps treat patients in a more humane way by understanding the processes the patient is going through.

## **Sociology**

Study, describe and analyze the processes of a society.

It is related to nursing in the methods that provide better adaptation of health programs in different groups of society.

## **Anatomy and physiology**

They study the form, structure and function of each part of the body.

It provides knowledge of the structure and function of the devices and systems of the human body, which allows the detection of alterations and the basis for comprehensive care.
