NURSING AND ITS RELATIONSHIP WITH OTHER SCIENCES

DEFINITION

Over the years nursing has gone enriching experiences and the use of other sciences to make this profession professional and quality for patients. The sciences most closely linked to nursing are the exact social and humanistic sciences.

BIOLOGY

It is the science that deals with living beings, their origin, evolution and properties (genesis, nutrition, evolution and reproduction). This science is the most used within nursing, since it is focused on knowing the diseases and processes of the human being.

BOTANY

Nursing has in common with botany that a large proportion of the body of knowledge is derived from naturalistic observation and categorization, as opposed to experimental testing of generalizations.

SOCIOLOGY

It is related to nursing in the methods used to have better communication and adaptation of health programs in the different groups that make up society.

GENETICS

The nurse performs care, social and community functions; executes essential programs to guarantee the health of the population and advanced care for pregnant women and women at preconception risk, makes possible the development of Advanced Technology Programs for the diagnosis, prevention and treatment of embryology diseases Genetics

PHARMACOLOGY

Science and practice of preparation, conservation, presentation and dispensing of medications in terms of the diagnosis, treatment and prevention of diseases. This science relates to nursing in terms of supply of medications and their management.

DEMOGRAPHY

It is related to nursing to know the groups of people with whom it has to work, especially in preventive measures, such as vaccination campaigns. and know groups vulnerable to certain diseases

Linkography

The sciences that nursing studies.
