NURSING AND ITS RELATIONSHIP WITH OTHER SCIENCES

Nursing and its relationship with other sciences
Over the years, nursing has been enriched by experiences and the use of other sciences to make this profession professional and of quality for patients. The sciences most closely linked to nursing are the exact, social and humanistic sciences

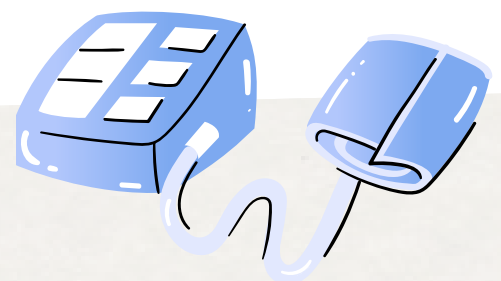

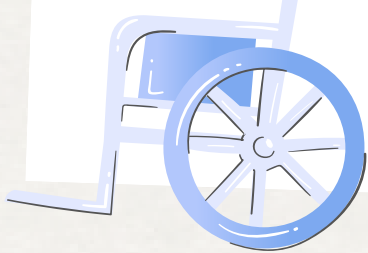

SCIENCE

Nursing is the discipline that is dedicated to the care and attention of the sick and wounded, as well as to other tasks of health care, clinics and the promotion of health and prevention of disease.

It is the science that deals with living beings, their origin, evolution and properties (genesis, nutrition, evolution and reproduction) This science is the most used within nursing.

NURSING IN MEXICO

Nursing, as an activity, has existed since the beginning of humanity. The

The human species has always been inhabited by people who are incapable of fending for themselves and therefore, it has always required taking care of the most vulnerable.

Nursing thus appears, united and related to humanity since ancient times. As a way of clarifying its birth, academic evolution and contributions to health care from its beginnings to the beginning of the

Up to the present moment, Nursing needs to describe its findings and development from a historical-descriptive perspective. From this perspective, historical research is presented as the method that provides the foundations that lead to characterize the professional identity, both individual and group, in a given social context. On the other hand, it provides the basis for identifying the origin, development and structure of the profession over time and history.

PNURSING RESEARCH

Knowledge of the past helps to understand the present and elucidate the future. An examination of the historical evolution of nursing research from the time of Florence Nightingale to the present day reveals a continual advance and change in the main fields of study.

NURSING NEEDS TO FACE CARE IN THE NEW MILLENNIUM, FOCUSING ON SYSTEMS BASED ON A CONCEPTUAL AND THEORETICAL BASIS, WHICH CONTAIN GOALS CAPABLE OF PROVIDING MEANS TO IMPROVE THE QUALITY OF CARE

Nurses seem to do a lot of research on their own practice; However, the study showed that there is a very marked trend towards individual work. The participation of other professionals is in the minority and seems to be based on the need for process support, such as statistics. It is worth highlighting the work carried out by nurses with master's degrees in the field of research.

There is no doubt that the reconstruction of professional knowledge is induced by technological progress and social changes. It challenges us to look for the meanings of nursing care in order to build a solid profession in the world of today and tomorrow

THE QUALITIES OF A RESPONSIBLE NURSE

Patients have more contact with nurses you something that is important for their than any other member of the hospital treatment. Responsible nurses show that team. To be a good nurse, you need they care. A(n) (3) nurse means two main qualities: you need good an unhappy patient. A good nurse is never communication skills and you need to be (4) .You may be busy but always well-(1) about your subject. try to smile and be (5) to your Listening is a useful communication skill patients and their visitors. A good nurse and you need to be (2) and must be (6) because you never really listen to your patient. They might tell know what new things you may have to do.
