*Cuatrimestre: Primero*

## it's nice to meet you

my name is Yari Yaneth Núñez López, I am 25 years old, I am of Mexican nationality, I was born in Pichucalco, Chiapas, I currently live in Ixhucatán, Chiapas, my parents are called Maribel López Cruz and Carlos Mario Núñez Vázquez, Mexican nationalities, I have three brothers amisady Núñez, Gonzalo Núñez and Joel Núñez .

We are from a very humble but very beautiful community, I studied my preschool at El Jardín de Niños Rosario Castellanos, I remember that I liked to go to kindergarten because I liked to play with my classmates, when we graduated it was something sad because and we are going to stand each one of us was going to study in different schools, my first day of primary school was something scary for me, it was something new, more because I did not know any of my classmates Little by little I went to dating, it was very difficult for me because to be able to study elementary school, you see that moving to another community took me a few months to be able to make new friends, but in the end we all interact with your masters very well It was a very nice stage for me

I studied high school in Ixhucatan, Chiapas, I remember my first day of high school, it was something very funny, I missed the classroom, many times high school is a very beautiful stage of youth, in particular I did not want to leave high school, I really liked the subject of arts, it was one of my favorite subjects, painting was a way to express my emotions and my feelings. It was a stage in my life Well, because these are moments that never come back.

I studied high school semi-schooled because I wanted to get my technique, I made it study semi-school, I took a career in nursing because I knew from the beginning that I wanted to be a nurse

When I finished the technique I was sent a year of social service to the Pichucalco Hospital and more and more I fell more and more in love with my career, I like nursing because I like to help knowing that I can contribute something to alleviate the pain of other people and above all I decided to study nursing for my mother, to be able to take care of her when she gets sick, that makes me very happy Because I could give back to her at least a little bit of what she did for me

If you saw the opportunity to choose my career again, I would choose nursing because it is what I am passionate about, it is what I want to be an excellent nurse.

Other things I like is playing basketball, going for a run, exercising, I love it, I feel also when I go for a run I feel free, I still love to dance, I feel that dancing and music is a way to de-stress, release everything I feel, more if I have problems that helps me forget everything that happens in my life, when I have nothing to do I lock myself in the room I put on some music and I start dancing and singing

I think I identify myself as a very happy social forgiveness when I give my friendship I give it for real without hypocrisy I like to be transparent without masks I don't like lies I hate being lied to because if I don't like to lie I don't like to be lied to but if I am a very happy person of course as we all have a bad side if they look for us but in me I think it reflects more the good that I do. The Bad

I decided to study Nursing because since I was a child I said that I wanted to be an excellent nurse and above all because helping other people is something that personally fills me with joy, nursing I identify it as kindness, kindness, patience, love for your work, love for your profession, love for what you do
