## Appearance and health

The infant patient is admitted to the emergency room with a fever with unknown cause. In the inspection we noticed his physical characteristics, he has black hair, blue eyes, has a pale skin tone due to dehydration that is derived from high body temperature. Their eyes are irritated, due to pathology and lack of rest, therefore, their eyes look tired.

In the assessment and taking of vital signs, we observed that the fever has increased with 39 ° C, which have not subsided, but have increased, the patient refers headache, vomiting reflexes and body pain, especially in the lower extremities, pain in the central part of the abdomen due to constant vomiting.

The patient has a weight of 35 kilograms, a height of 1.30 meters. The mood that presents is of fatigue, presents weakness to walk and perform activities autonomously.

The patient under 10 years of age, after doing the corresponding studies, is diagnosed with dengue, which is treated with the correct medications and control of medical consultations.
