ENDANGERED FAUNA

What is it?

An endangered species is when its representatives are at risk of disappearing from the earth.

Causes.

Destruction and fragmentation of their habitats.

Climate change.

Hunting and illegal trafficking.

The introduction of exotic species.

How to avoid or help.

Avoid fragmentation of their habitats.

Punish illegal hunting and trafficking.

Creation of nature reserves.

Reproduce the animal in captivity.

Fight against pollution and climate change.

Endangered species.

According to the IUCN, there are approximately 5,200 species of animals currently in danger of extinction.

Some examples.

Mammals.

Giant panda from china.

It is believed that there are only 1000 left. Their bamboo forests are disappearing and they are not reproducing.

Black rhinoceros from Africa.

Its main danger of extinction is hunting. It is estimated that there are 2000 left.

Birds.

Philippine eagle.

Due to hunting and deforestation. It is estimated that there are only about 400 breeding pairs left in the wild.

insects.

Monarch butterfly.

It is in a state of conservation.
