A threatened species is any species likely to become extinct in the near future.

The panda, panda bear or giant panda is a species of mammal from the order of carnivores. Deforestation, territory fragmentation and poaching, threats of the giant panda for WWF on its International Day.

The tiger is a highly endangered species. Tigers currently occupy 5% of its historical territory, decreasing from a population of 100,000 at the beginning of the 20th century, to the current figure of only 3,890 tigers living in the wild.

The pink dolphin is listed as an Endangered (EN) species on both the Ecuadorian and IUCN Red Lists.

Black African rhinoceros: Classified as "endangered." When the settlers arrived in Africa they almost exterminated them, although fortunately some survived and today the species is slowly recovering.

"ENDANGERED FAUNA"

The imperial eagle is one of the most endangered birds of prey on the planet. Its presence is focused exclusively on the Iberian Peninsula. It is one of the most valuable species that roams our lands.
