Endangered fauna

DEFINITION

These animals are critically endangered and one step closer to extinction.

RINOCERONTE

Once found throughout south-east Asia, Javan rhinos have suffered a staggering decline in their numbers due to hunting and habitat loss.

TIGER

Despite being an alarming figure, in recent years we have experienced an optimistic report with a growth in their populations. Its population has gone from 3,200 individuals in 2010 to 3,890 in the last census.

PANDA

The panda, panda bear or giant panda is a species of mammal from the order of carnivores. The study of its DNA includes it among the members of the bear family, with the spectacled bear being its closest relative, which it belongs to the tremarctines subfamily.

ENTRE OTROS

Lorem ipsum dolor sit amet, consectetur adipiscing elit. In eget accumsan ex. Nunc ut dolor ante.

BIBLIOGRAFIA:

The large number of species that have become extinct in the last one hundred and fifty years is a cause for concern. The current rate of extinction is ten to one hundred times faster than any previous mass extinction in Earth's history. If this rate of extinction persists or accelerates, the number of species extinctions in the next decade could be estimated in the millions.⁴ Although most people respond readily to the threat of extinction of individual mammals or birds, the most important problem of ecology is the threat to the stability of entire ecosystems, whenever key
