# ENDANGERED FAUNA

The threat of extinction.

Prevention

There are many species of animals in the world.

And indeed in our own country which are under the threat of extinction.

Currently many organizations are responsible for drawing up lists of animals in danger of extinction.

- Prevention methods:
- Protect the ecosystem for these animals
  - Sensitizing public opinion
  - Reproducing the animal in captivity.

Two species that may become extinct in the 21st century.

These are

The giant panda:  
is one of the best known of all the animals in danger.

This animal only lives in China. It is believed that only about 1,000 giant pandas are left.

The main danger for this animal is the gradual disappearance of the bamboo forest where it lives.

The black rhinoceros:  
Is in danger of extinction mainly as a result of hunting.

Since 1970, 95% of the black rhinoceros have disappeared.

It is now estimated that only 2,000 remain.
