CUATRIMESTRE: 2do

TAREA: CUADRO SINOPTICO HEPATOBILIRY DISEASE

ASIGNATURA: INGLES

NOMBRE DEL ALUMNO: JOSE JULIAN HERNANDEZ SOLORIO

NOMBRE DEL ASESOR: ARREOLA JIMENEZ EDUARDO ENRIQUE

UNIDAD: 3

FECHA:09/03/2024

important organs

Organs and ducts that make and store bile (fluid produced by the liver and helps digest fat), and release it into the small intestine. The hepatobiliary system includes the gallbladder and the bile ducts, that is, the bile ducts located inside and outside the liver.

chronic disease in which the bile ducts of the liver are slowly destroyed

HEPATOBILIAR Y DISEASE

objective of the symposium

They are a series of formal sessions in which a group of specialists present and debate a specific topic from different approaches through each of their individual interventions. Its purpose is to provide answers and clarify doubts regarding the topic discussed to attendees.

It allows you to delve deeper into specific topics and acquire new skills.

recommendation for glycemic control The most common way to check your blood glucose level at home is with a glucometer. You get a drop of blood by pricking the side of your fingertip with a lancet. Then, apply the blood to a test strip.

Lose excess weight. Losing weight reduces the risk of diabetes. ...

Do more physical activity.
Regular physical activity has
many benefits. ...
Eat healthy plant foods. ...
Eat healthy fats.
