# Hepatobiliary disease

What is it?

It is a common cause of morbidity and mortality in small animal practice.

What does the liver do?

It plays a central role in a wide range of processes, including the metabolism of

Glucose  
Carbohydrates  
Proteins  
Lipids

Clinical signs

Signs of hepatobiliary disease usually occur in advanced stages of the disease due to the high reserve and regenerative capacity of the liver.

A good diagnosis

Early and accurate identification of hepatobiliary disease is important for improving long-term outcome

Purpose of the symposium

The objective of this symposium is to provide practitioners with a diagnostic approach for patients with hepatobiliary disease.
