In this essay we will talk about veterinary and zootechnics, their quality, care and use for the product, obtaining a good profit. Zootechnics is a science that deals with the reproduction, breeding and use of animals for human consumption. That is, looking for efficient techniques to obtain better production of any animal product, also with better disease control, contributes to nutritional improvement to advance the production of animal products and faster. The importance of veterinary doctors in the zootechnics plays an important role since with them you can carry out diagnoses or surveillance of some diseases that could affect the production and marketing of animals, they are also in charge of administering deworming and vaccinations of the animals whenever necessary to better meat quality and health for the consumer. It also takes care of the hygiene measures that must be carried out on production campuses for the prevention of diseases, that is, both roles, as well as zootechnician and veterinary doctor, are important for good production since one takes care of the health of the animal. and the other gives techniques to make better use of the animal.

Veterinary Medicine can be defined as the branch of Medicine that addresses the health of animals, not humans, in order to take control over the study, diagnosis, treatment, and even forms of prevention of the different diseases that can affect the good condition. of the different species, regardless of whether their habitat is domestic or wild. In this sense, just as human medicine has the doctor as the highest professional in this discipline, in Veterinary Medicine this role is played by the veterinary doctor, who He is the main person in charge of ensuring that the different specimens in his care are kept in the best health conditions, and in the event of an injury, illness or condition, being able to identify the origin and solve it efficiently. Veterinary medicine is a very important discipline, since animals are a fundamental part of our society. Domestic animals, such as dogs and cats, are part of our families and provide us with company and affection. Wild animals, for their part, are essential for the ecological balance of the planet. Therefore, it is essential to have trained professionals who are responsible for its care and protection. Veterinary medicine has a long history, dating back to the time of the ancient Egyptians. At that time, veterinarians were mainly responsible for caring for animals used in agriculture and livestock. Over time, the discipline evolved and spread to other areas, such as public health and research. Currently, veterinary medicine is a very complex and specialized discipline, which covers areas such as surgery, oncology, cardiology and neurology, among others. Veterinarians are also responsible for the prevention and control of diseases that can affect both animals and humans, such as rabies and avian influenza. Veterinary medicine has a great impact on today's society, since it is responsible for protecting the health and well-being of animals, as well as preventing and controlling diseases that can affect humans. In addition, veterinarians also play an important role in the research and development of new treatments and therapies for diseases that affect both animals and humans. On the other hand, veterinary medicine also has an

important economic impact, since animal production is a fundamental part of the economy of many countries. The veterinarian is responsible for ensuring that animals are healthy and free of diseases, which contributes to the production of safe, high-quality food. Veterinary medicine is a very important discipline in today's society, since it is responsible for the care and health of animals. Veterinarians are highly trained professionals dedicated to preventing, diagnosing and treating diseases in animals, both domestic and wild.

According to specialists, the term "veterinary" does not have a clear etymological origin, and on the contrary there are several different types of hypotheses with the origin of this word. In this sense, one of the theories suggests that the word may come from the Latin *veterinarius*, with which the cultured speakers of this language meant those who practiced the art of healing the *veterina*, that is, the beasts of burden, used for different economic activities. However, other currents affirm that the word "veterinary" may be related to the Arabic *albéitar*, with which this culture designated those who fulfilled the job of caring for the health of horses. Beyond the veracity of the origin of the term, these theories seem to reveal the antiquity of this profession.

In conclusion, veterinary medicine is a very important discipline in today's society, which is responsible for protecting the health and well-being of animals, as well as preventing and controlling diseases that can affect both animals and humans. The evolution of veterinary medicine has been impressive over the years, and today it has become a highly specialized and complex discipline. Veterinary medicine has a great impact on society, both in the public health and economic spheres. Therefore, it is essential to have highly trained professionals who are responsible for the care and protection of animals.
