"ENDANGERED FAUNA"

TIGER.

Although this species was once very common in breeding, there are now only 6,000 tigers left worldwide

The giant panda

This animal only lives in China. It is believed that there are only about 1,000 giant pandas left. The main danger for this animal is the gradual disappearance of the bamboo forests where it lives.

The black rhinoceros of Africa

It is in danger of extinction mainly as a result of hunting. Since 1970, 95% of black rhinos have disappeared and it is now estimated that only 2,000 remain.
