~~Write~~ Write about the teaching experience and why or why not AI could replace teachers/nurses?

Hello, my name is Hugo, I'm a student right now, I have 3 years giving/doing my social service, my experience teaching ~~it was~~ has been amazing, because I didn't like children and I didn't like teaching, however at the moment I was stand from children I felt nervous and I didn't know what to do with them.

Now I have 3 year on this job and my thought about the children and teaching have changed a lot. ~~Now~~ I think that I didn't like boys because I'm the only siblings in my family and I'd never been near children, Now I've learned to get together with boys and I think that I have a good relationship with them and I've learned to teach and I love to teach, although I think this year is the last one on this jobs because I have another plans for my life.

~~Teacher~~
Personalized
Challenge.

I think that AI could replace ~~the~~ teachers and nurses in some cases but I don't think AI could do the same job that people, for example AI could do teachers ~~teach some~~ English, mathematics or some other subjects, however it'll be the same as a teacher in the classroom explaining the topic to the students in a personalized way.

On the other hand, AI couldn't replace the ~~human~~ human cares and ~~the~~ medical cares because AI never ~~can~~ will be able to do the thing like/as a human do it.
