# SMALL AND LARGE SPECIES

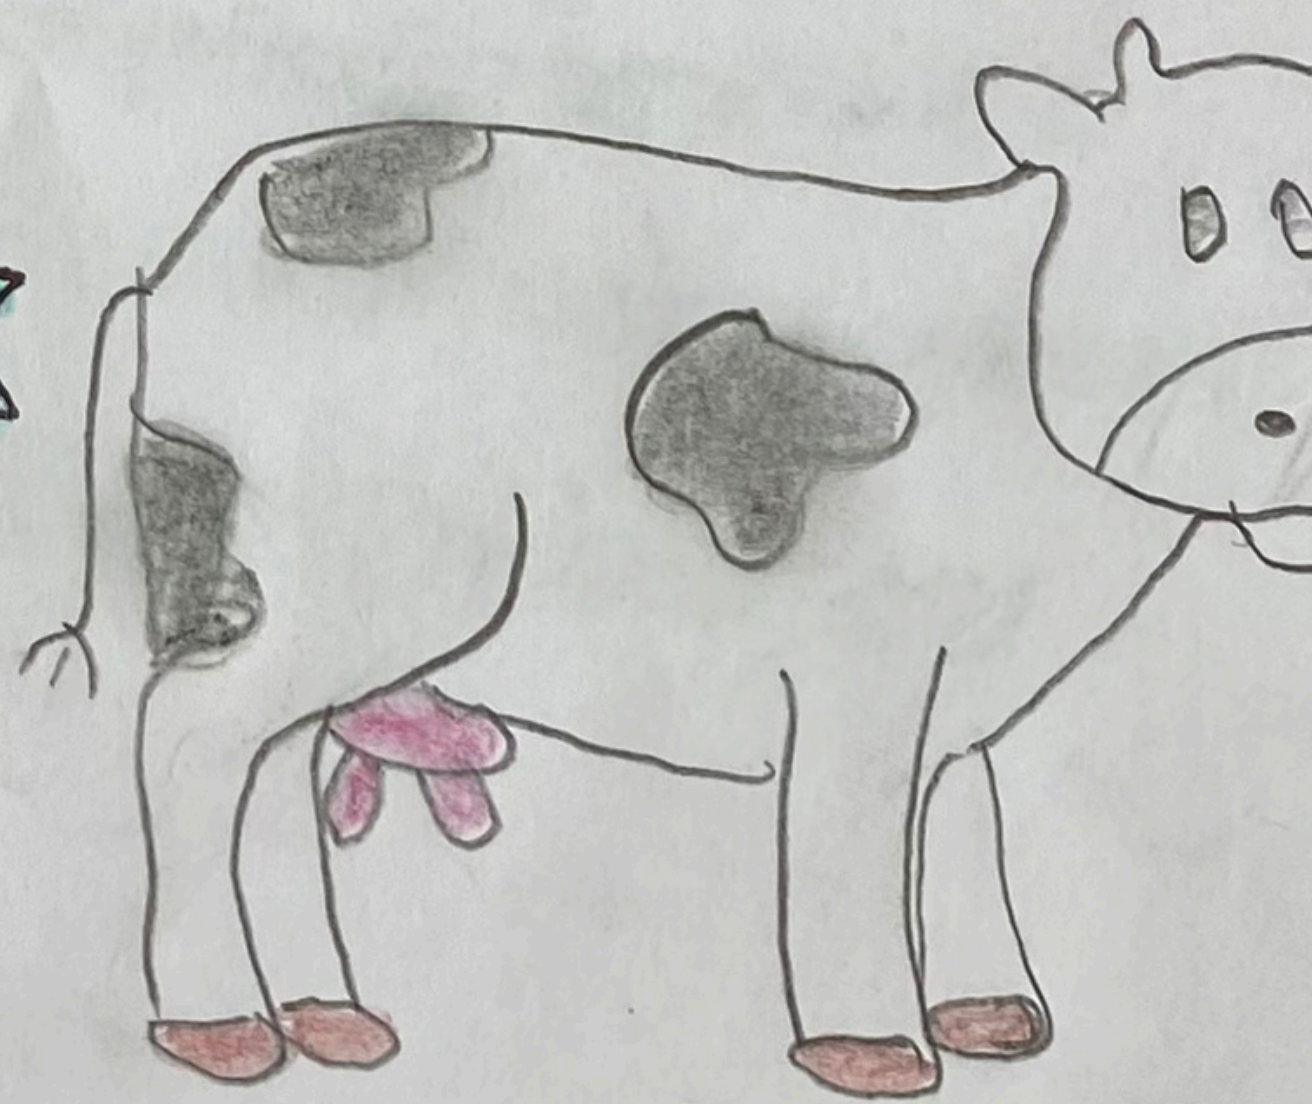

## SMALL SPECIES

Small species are small animals such as birds, fish, reptiles rabbits

Small species are those animals considered for domestic use within the scope of care direct or indirect food consumption.

## LARGE SPECIES

Large species are large animals such as horses and cattle, which are used in animals production large animals veterinarians are responsible.

### ARE DISTINGUISHED

In general, small species require more attention and care than large species.

Species of large genera are characterized by having many varieties, which tend to develop into new species this cause large genera to become enlarged forms to become even more predominant.
