Zootechies.

Semester:

2° A°

Matter:

English 2

teacher:

Eduardo Enrique Arreola Jimenez

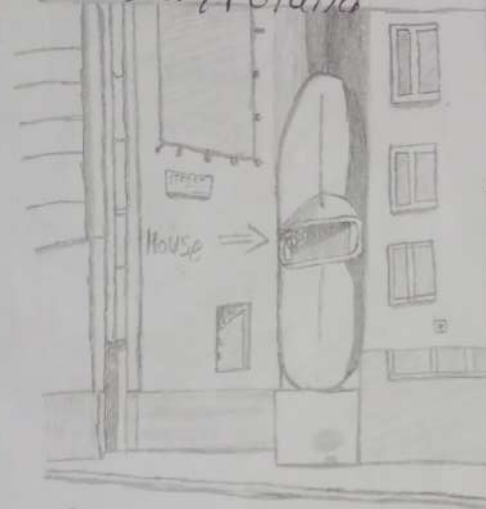

Activity:

Unusual houses

Date:

January, 25, 2025

Keret house in Warsaw, Poland

People across the globe should take inspiration from Keret House for making the most of every inch of space available. Known to be the slimmest house in the world, Keret House is 152 centimeters wide. The resident of this place is its designer, Jakub Szczepniak, who perfectly fitted his house in between two commercial buildings.

Upside down house in Trassenheide, Germany

Created by Klaudiusz Gobs and Sebastian Mikolajek under the world stands on its head project. This whimsical architecture was designed for an exhibition conducted in Trassenheide, Germany. If you are looking for a reason behind the design then, let us tell you that there is one. When asked about the inspiration behind creating an upside-down house, the creators answered that they wanted to do something different.

Toilet house in
Suwon, Korea.

This toilet-shaped house was
Huewoojae which meant a
place where one can find
resolution of their worries.
With the objective to draw at-
tention to the world's sanitation
problems, the chairman of the
inaugural assembly of the
world toilet association
designed this weird yet unique
house.

Gue(ho)st house in
delme, France.

It is difficult to put tog et some
words for this house because of
how bizarre it is. French artist
Christopher berdaguer and Marie
Pejus were the architects of this
house which has formerly an old
prison, a funeral house, and a
school. The theme of all white
exteriors is sure to give rouchins
down the spine. Also, the white
colour is not from the usual
paint, polystyrene on mellow resin
is the secret for it
