GRAPHIC DESIGNER VS ARCHITECT

Comparative

- 1.- Being a graphic designer is more interesting than being an Architect
- 2.- A graphic designer can do more things than a Architect
- 3.- Is more difficult to be a Architect than a Graphic Designer
- 4.- A architect have to know more mathematics than a Graphic Designer
- 5.- A Graphic Designer have to be more creative than a Architect

Superlative

- 1.- Graphic Design is the best career to learn about drawing
- 2.- Architect is the most stressful and tiring career
- 3.- Graphic design is the most beautiful career

I prefer graphic designer because you do many creative activities than a Architect. A architect have to follow a plan and a Graphic Designer use imagination to create something. I think being a Architect is harder than being a Graphic Designer. A graphic designer just do designs for publicity like products, packaging, containers and services, not like an Architect that have to calculate measures for the constructions. Architect require more skills to work with numbers and doesn't have to be very creative. So I like graphic designer because can work, with colors, forms and textures and also you can improvise more than a Architect
