problem personal :ectopic pregnancy

last month,it was a wednesday,may 21 I went out to cut a lemon when suddenly I felt a sharp pain in My stomach and belly.For a few hours I thought it was going to go away ,but then I felt they pain increase more.afterwards,they took me to doctor a f the doctor saif that it was necessary for me to hace an ultrasound to rele out that it was My problem.Afterwards,they gave myhe results ando they told me that it was necessary for me to hace surgery because it was an ectopic pregnancy and that if I didn't do it My life was at risk that I cold die.Half an hours later they told me that the surgery was a success,they took me to My room,after five days the doctor discharged me and three moths passed and I feel well now months after recovery , a cousin asks me what My opinion or My testimony was that for me it was an ectopic pregnancy when the fertilized egg implants outside the uterus and it is dangerous for every woman who does not take care of herself responsibly and that I do not recomnend it,that they better take care of themselves with respect condoms.
