VASECTOMIA

A collage of various medical instruments used in endoscopy. It includes several long, thin endoscopes with different control handles (some purple, some blue, some white). There are also various types of biopsy forceps and snares, which are used to take tissue samples or remove polyps. At the bottom center, there is a video monitor displaying a live feed from an endoscope.

The collage displays a variety of medical equipment and instruments. The top-left image shows a rectangular metal tray. The top-center image is a diagram titled 'Equipo Quirúrgico' (Surgical Equipment) showing various surgical instruments like scalpels, scissors, and forceps. The top-right image shows a metal clamp or retractor. The middle-left image shows a pair of surgical forceps. The middle-center image shows a syringe with a red plunger. The middle-right image shows a coiled clear tube with blue connectors. The bottom-left image shows a pair of surgical forceps. The bottom-right image shows a blue cable with a three-prong electrical plug and a yellow and blue connector.
